

iR*EDI for

Many companies already use an EDI translator. However, more companies are now searching for a solution that productively manages the data exchanged with their trading partners, while tracking related priority activities. Powerful and cost-effective, iR*EDI provides IFS users with advantages now, and in the future, including support for XML and Web services. iR*EDI includes several modules that work together to maximize your productivity.

iR*EDI Purchase Order System

- * Purchase Order & Acknowledgement Storage - defined at trading partner or business entity level.
- * Acknowledgement Creation - generated automatically, or maintainable by your staff for return to your customer.
- * Purchase Order Change Management - all PO Change transactions are stored and linked with the original customer PO for easy reference.

Radley Mapping Services

Monitoring compliance with EDI specifications requires detailed knowledge and experience that is often beyond the resources of most IT staffs. Hourly charges for mapping and maintenance can quickly exceed your EDI budget. You can contain these costs with Radley's fixed-fee trading partner mapping, certification and annual maintenance services. Radley's staff provides predictable, reliable support for your EDI environment.

iR*EDI Mapper

For some manufacturers, the sheer number of EDI trading partners may justify your own internal EDI development and support. Using the iR*EDI Mapper, your IT staff can create and maintain transaction set formats and translation data schemas. The iR*EDI Mapper includes built-in, reusable components that provide you with the head-start you need.

Radley is a Strategic IFS Software Alliance Partner for integrated EDI, Automotive Release Accounting and IFS Data Collection solutions.

iR*EDI Scheduler Features

- * Schedule recurring execution of EDI functions by time, day of week, with frequency control.
- * E-mail EDI job notifications to users based on successful and/or job completion.
- * Complete job history - view by run date/time, job name or completion status.
- * Configurable security - manage the access privileges of each user to their own jobs, or the jobs defined within their access group.

iR*EDI Document Journal

- * Transaction Archives - maintain easy access to all transactions received and sent, transaction reports, and IFS exchange files.
- * Transaction Reprocessing - any transaction may be reprocessed or retransmitted as needed from the archives.
- * Historical & Real-time Transaction Status - available and viewable by date, interchange ID, trading partner type, or user-defined criteria.
- * View, print or reprint summarized or detailed transaction set processing reports.
- * Email selected transaction set report copies to appropriate parties as needed.
